

D.K.M COLLEGE FOR WOMEN
VELLORE - 1

(AUTONOMOUS)

B.Sc Computer Science

SYLLABUS

Under
CHOICE BASED CREDIT SYSTEM (CBCS)
[With effect from the year 2021 – 2022]

D.K.M. COLLEGE FOR WOMEN (AUTONOMOUS)
DEPARTMENT OF COMPUTER SCIENCE

PROGRAMME EDUCATIONAL OBJECTIVES

PEO1: Graduates will have skills and knowledge to excel in their professional career in Computer Science and its related disciplines.

PEO2: Graduates will be ethically and socially responsible solution providers in Computer Science and successfully pursue higher education in reputed institutions.

PROGRAMME OUTCOME

PO1: Problem Analysis: To identify, formulate and analyze complex Computer Science and Applications problems in the areas of hardware, software, theoretical Computer Science to reach significant conclusions by applying Mathematics, Natural sciences, Accounts, Computer Science and Applications principles.

PO2: Design & Development of Solutions: To design and build a system, component, process or a program for complex problems by factoring in all the requirements and various design tradeoffs, with appropriate consideration for the public health and safety, cultural, social and environmental factors

PO3: Modern Tool Usage: To create, select and apply state of the art tools and techniques in designing, developing and testing a computing system or its component.

PO4: Ethics: To apply professional ethics and cyber regulations, responsibilities and pledge to the norms of professional computing practice.

PO5:Environment and Sustainability: To demonstrate the knowledge of sustainable development of computing systems/products/solutions with an understanding of the impact of these solutions on the Society and Environment.

PO6: Life – long Learning: To spot the need for and engage in lifelong learning to cope up with the rapidly evolving disciplines of Computer Science and applications domains.

D.K.M COLLEGE FOR WOMEN (AUTONOMOUS), VELLORE – 1

DIGITAL LOGIC AND PROGRAMMING IN C

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
I		CORE PAPER -1	7	105	7	105	0	0	4

COURSE OBJECTIVE

- This paper develops the basics concept used in design and analysis of digital systems and to develop the programming skills using C Language.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Learn the basic concepts of digital logic Circuits and Boolean Algebra Concept.	K1
CO2	Understand about Combinational and sequential circuits.	K2
CO3	Learn the fundamental concept of C Programming language.	K1
CO4	To implement Array, Functions and structures	K2
CO5	To create files & pointers and apply its operations in program.	K3

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

SYLLABUS

UNIT I: NUMBER SYSTEMS AND BOOLEAN ALGEBRA

23 Hrs

NUMBER SYSTEMS: Decimal - Binary - Octal - Hexadecimal - Number Base Conversions – Complements - 1's Complement - 2's complement - 9's Complement – 10's Complements - binary Codes - BCD – Excess-3 - Gray code.

BOOLEAN ALGEBRA: Definition of Boolean algebra – Theorems of Boolean algebra - Boolean Functions – Digital Logic gates and Truth Table.

SIMPLIFICATION OF BOOLEAN FUNCTIONS: The Map Method – Two Variable Map - Three Variable Map - Four Variable Map - Don't Care Conditions – Product of Sums Simplification.

UNIT-II: COMBINATIONAL AND SEQUENTIAL CIRCUITS

19 Hrs

COMBINATIONAL LOGIC: Adders - Sub tractors – multiplexers - de-multiplexers – encoders – decoders.

SEQUENTIAL LOGIC: Flip flops: Basic Flip flop - Clocked RS Flip flop – D Flip flop – JK Flip flop – T Flip flop - Triggering of Flip Flops: Master Slave.

REGISTERS AND COUNTERS: Registers - 4 bit Register - Ripple Counter.

UNIT –III: C BASICS AND CONTROL CONSTRUCTS

21 Hrs

C fundamentals- Keywords - Variables – Data types - Operators- Constants- Expression – Library Functions- Decision making branching and looping – continue - break

UNIT IV: ARRAYS, FUNCTIONS AND STRUCTURES

21 Hrs

Arrays-Multi dimensional arrays- String- User defined functions- Call by Value and reference-Recursion- Storage classes- Structures and Union

UNIT – V: POINTERS AND FILES

21 Hrs

Pointers- Pointer operations and Arithmetic- File management in C : File opening and closing- I/O operations on files - Error handling during I/O operations - Random access to files - Command line arguments

Distribution of Marks: Theory: 70% and Problems:30%

PROGRAMMING IN C

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
I		CORE PRACT-I	3	45	0	0	3	45	3

COURSE OBJECTIVE

- This practical develops the basic programming skills in C Language.

SYLLABUS

1. Summation of Series: Sin(x) (Compare with built in functions)
2. Summation of Series Cos(x) (Compare with built in functions)
3. Counting the no. of vowels, consonants, words, white spaces in a line of text
4. Reverse a string & check for palindrome without built in string function
5. ${}^n P_r$, ${}^n C_r$ in a single program using function
6. Matrix Addition, subtraction and multiplication
7. Linear Search of a number in an array
8. Sorting an array in ascending and descending order
9. Finding maximum and minimum of list of numbers
10. Call by value and call by reference of functions
11. Employee pay bill using structure
12. Preparing an EB bill using file

Distribution of Marks: Program Output with Viva voce: 85% and Record:15%

SYLLABUS DESIGNERS

C++ AND DATA STRUCTURE

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
II		CORE PAPER-II	6	90	6	90	0	0	4

COURSE OBJECTIVE

➤ This paper helps the students to quickly move into the world of C++ with Object Oriented Programming and Data structure concept.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	To learn the Basic Concept of Object Oriented Programming Language.	K1
CO2	To understand how to implement OOPs Concept in C++.	K2
CO3	Understanding the Data Structure Concept	K2
CO4	To develop the algorithms for various data structure operations and applications.	K3
CO5	To pertain the data in trees and Graphs.	K4

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

SYLLABUS

UNIT I – BASICS OF OOP'S and C++

18 Hrs

Basic Concepts of OOP - Benefits of OOP - Applications of OOP- Introduction to C++ - Streams Classes & Member functions of stream class - manipulators - -I/O in C++ -Formatted & - Unformatted Console I/O Operations.

UNIT II – CLASSES AND OBJECTS AND FILE OPERATIONS 19 Hrs

Classes and Objects - Constructors and Destructors - Types of Constructors - Defining member functions - Inline function - Friend function- Function Overloading - Operator overloading - Inheritance - Types of Inheritance - Virtual Functions and Polymorphism. Files-File operations.

UNIT III – BASICS OF DATA STRUCTURES

18 Hrs

Definition of Data structure – Primitive and Composite data types – Arrays, Operations on Arrays - Stack – Operations on stack – Infix to Post fix Conversion - Queue – Operations on Queue – Circular Queues.

UNIT IV -COMPOSITE DATA STRUCTURES

17 Hrs

Singly Linked List – Operations, - Doubly Linked List – Operations – Sorting and Searching.

UNIT V –TREES AND GRAPHS

18 Hrs

Trees and Graphs: Binary Trees - Operations - Tree Traversals- Recursive In order, Preorder, Post order - Graph - Definition, Types of Graphs - Graph Traversal – DFS & BFS

Distribution of Marks: Theory :80% and Problems:20%

C++ AND DATA STRUCTURE

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
II		CORE PRACTICAL – 2	3	45	0	0	45	45	3

COURSE OBJECTIVE

- This practical help us to develops the Object Oriented Programming Concept using C++ and Data Structure.

C++ CONCEPTS

1. Operator Overloading
2. Friend function
3. Inheritance
4. Polymorphism
5. Files

DATA STRUCTURE

1. Implement PUSH, POP operations of stack using Arrays
2. Implement add, delete operations of queue using Pointers
3. Conversions of infix to postfix using stack operations
4. Addition of two polynomials using Arrays
5. Binary tree traversals [in-order, pre-order, and post-order] using linked list.
6. Depth First Search and Breadth first Search for Graphs.

Distribution of Marks: Program Output with Viva voce: 85% and Record: 15%

SYLLABUS DESIGNERS

VISUAL PROGRAMMING AND DBMS

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
III		Core Paper – 3	5	75	5	75	-	-	4

COURSE OBJECTIVE

- The objective of the **course** is to present an introduction to **database management** systems, with an emphasis on how to organize, maintain and retrieve - efficiently, and effectively - information from a **DBMS**.
- It also develop the students about Data Base Creation and Manipulation, along with Application development in Visual Basic 6.0 with database connectivity.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1 – K4)
CO1	Explain the structure and model of the relational database system	K2
CO2	Design a database based on a data model considering the normalization to a specified level	K3
CO3	Explain the basics of Oracle and PL/SQL.	K1
CO4	Learn to use Visual basic Integrated Development Environment and language basics.	K2
CO5	Learn the concept of Arrays, Objects and Database connectivity.	K3

Knowledge Level – K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze

MAPPING WITH PROGRAMME OUTCOME

CO5	S	S	S	M	S	M

S – Strong

M – Medium

L – Low

SYLLABUS

UNIT I – BASICS OF DBMS AND RELATIONAL ALGEBRA

16 Hrs

Purpose of Database – Overall system Structure – Entity Relationship Model – Mapping Constraints – Keys – E – R Diagram. Relational Algebra – Tuple And Domain Relational Calculus.

UNIT II – NORMALIZATION AND SQL

16 Hrs

Normalization Using Functional Dependencies – First Normal Form – Second Normal Form – Third Normal Form – Fourth Normal Form and BCNF. Structured Query Language – Basic Structure – Set Operation – Aggregate Function

UNIT III – BASICS OF ORACLE

12 Hrs

Introduction to ORACLE – ORACLE Commands: DDL – DML and DCL Statements – ORACLE Built – in Functions – PL/SQL: Blocks – Control statements – Loops – Cursor Management – Triggers – Functions & Procedure – Data types – Exception Handling.

UNIT IV – VB INTEGRATED DEVELOPMENT ENVIRONMENT

15 Hrs

IDE Integrated Development Environment – Creating Controls and Properties – Variables and Data types – Message box–List box – Combo box – Control and Loop structures – Procedures and Functions

UNIT V – ARRAYS AND ODBC

16 Hrs

Arrays – Records – Control Arrays – MS Flex Grid Control– VB objects – Menus – Mouse Events– Dialog boxes – MDI form – Do events and sub main – Error trapping – File Handling – File System control – ODBC using RDO and DAO – OLE fundamentals

Distribution of Marks: Theory: 75% and Applications

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
III		Skill Based Pract – I	2	30	0	0	2	30	2

COURSE OBJECTIVE

This practical enables the student to learn open source software like HTML, CSS, JAVA SCRIPT, VB SCRIPT and XML in Web Designing. It also helps to expose students to free open source software environment and introduce them to use open source packages.

COURSE OUTCOME

On the successful completion of the course, students will be able to learn

CO Number	CO Statement	Knowledge Level (K1 – K4)
CO1	Learn to create HTML web pages and their links	K1
CO2	Can Design various cascading Style sheets	K3
CO3	Learn to implement Dynamic web pages using JAVA Script	K2
CO4	Apply knowledge to Create Dynamic web pages using VB Script	K3
CO5	Learn the basics of XML	K2

Knowledge Level – K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze

SYLLABUS

UNIT I – BASIC OF HTML

6 Hrs

Basic- Introduction to HTML -List -Creating table -Linking document frames

UNIT II – STYLE SHEET & ITS PROPERTIES

6 Hrs

Graphics to HTML doc -Style sheet basic -Add style to document -Creating style sheet rule
-Style sheet properties

UNIT III – JAVASCRIPT

6 Hrs

Introduction to JavaScript - JavaScript syntax -Data type -Variable -Array -Operator and
expression -Looping constructor - Function -Dialog box.

UNIT IV – VB SCRIPT

6 Hrs

VB script - Introduction to VB script -Variables - Constants - Arrays - Operators - Control
structures - Functions & Methods

UNIT V – XML

6 Hrs

XML - Introduction to XML – Basic programming – Elements and Attributes – Document
Type Definitions (DTD) – Schema.

PRACTICAL EXERCISE

1. Create a static web page which defines all text formatting tags of HTML in tabular format
2. Create a web page including list, image and links.
3. Create a web page implementing Inline and Embedded Stylesheets
4. Create a web page implementing External Stylesheet.
5. Create an array, display its content using JavaScript
6. Create a web page that utilizes cookie information using JavaScript.
7. Create a dynamic web page which prints Fibonacci series from 1 to 10 in VBScript
8. Create a dynamic web page which prints factorial of a given number in VBScript
9. Create a simple XML file and also create dynamic web page in which XML tags are used.

Distribution of Marks: Program Output with Viva voce: 85% and Record:15%

III		Non Major Paper – 1	2	30	2	30			2

COURSE OBJECTIVE

This course develops the students to know the basic concept of hardware, software and networking in a computer system.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1 – K4)
CO1	Learn the anatomy and history of Digital Computer	K1
CO2	Understands about storage and IO devices of computer	K2
CO3	Learn to use Microsoft Office Products	K3
CO4	Understand the usage of Multimedia	K2
CO5	Attain a wide knowledge regarding Internet and usage of World Wide Web.	K3

Knowledge Level – K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze

MAPPING WITH PROGRAMME OUTCOME

COS	PO1	PO2	PO3	PO4	PO5	PO6

S – Strong

M – Medium

L – Low

SYLLABUS

UNIT I – BASICS OF COMPUTER

6 Hrs

Introduction: History of Computer - Parts of Computer System - Hardware Devices - Software – Anatomy of Digital Computer.

UNIT-II – PARTS OF COMPUTER

6 Hrs

Memory Units – Storage Devices- Input Devices-Output Devices-Number System.

UNIT-III – MS-OFFICE

7 Hrs

Microsoft Word - Microsoft Excel - Microsoft PowerPoint-MS-Access.

UNIT-IV – WORKING WITH MULTIMEDIA

5 Hrs

Introduction to Multimedia - Images - Sound -Video – Text- Text Generation- Multimedia Applications.

UNIT-V – INTERNET AND WORLD WIDE WEB

6 Hrs

Introduction to Internet and World Wide Web- E-Mail Basics – Computer Networks.

Distribution of Marks: Theory: 75% and Applications:25%

ASP.NET

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
IV		Core Theory – 4	5	75	5	75	0	0	4

COURSE OBJECTIVE

- This course helps the students to quickly move into the world of ASP.NET with website designing
- To Create a Web form with server controls.
- To Separate page code from content with code-behind pages, page controls, and components,
- To Display dynamic data from a data source by using ADO.NET and data binding,
- To Debug .NET Active Server Pages.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1 – K4)
CO1	Learn Technical knowledge	K1
CO2	Apply technical knowledge and perform specific technical skills,	K2
CO3	Design, Debug and Deploy web applications using ASP.NET	K3
CO4	Use ASP.NET controls in web applications.	K3
CO5	Create database driven ASP.NET web applications and web services	K4

Knowledge Level – K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze

SYLLABUS

UNIT I: ASP.NET BASICS

Introduction to ASP.NET: .NET Framework (CLR, CLI, BCL)-ASP.NET Basics- ASP.NET Page Structure- Page Life Cycle. Controls: HTML Server Controls - Web Server Controls - Web User Controls - Validation Controls - Custom Web Controls.

UNIT II: FORM

Form validation: Client side validation - Server side validation - Validation Controls: Required Field- Comparison Range - Calendar Control - Ad rotator Control - Internet Explorer Control. State Management: View State - Control State - Hidden Fields – Cookies - Query Strings - Application State - Session State.

UNIT III: ADO.NET

Architecture of ADO .NET - Connected and Disconnected Database - Create Database - Create connection Using ADO.NET Object model - Connection Class - Command Class - Data Adapter Class - Dataset Class- Display data on data bound controls and Data Grid.

UNIT IV: DATABASE ACCESSING

Database accessing on Web Applications: Data Binding Concept with web - Creating Data Grid - Binding standard web server controls - Display data on web form using Data Bound Controls.

UNIT V: XML

Writing Datasets to XML - Reading datasets with XML - WEB services: Remote method call using XML, SOAP - Web service description language - Building and Consuming a web service - Web Application deployment.

Practical For Classes :

1. Individual project development was done.

Distribution of Marks: Theory 80% and Applications: 20%

MICROPROCESSOR

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
IV		SB Practical – 2	2	30	0	0	2	30	2

COURSE OBJECTIVE

- This practical helps to introduce the students with the architecture and operation of typical microprocessors and microcontrollers.
- To familiarize the students with the programming and interfacing of microprocessors and microcontrollers.
- To provide strong foundation for designing real world applications using microprocessors and microcontrollers.

COURSE OUTCOME

On successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Learn basic knowledge of microprocessor	K1
CO2	Acquire technical knowledge and perform specific technical tools,	K2
CO3	Understands the basic concept of OPCODE	K3
CO4	Use Microprocessor to perform logical and arithmetic operations	K3
CO5	Create controls for digit transactions programs	K4

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyse

L – Low

SYLLABUS

UNIT I – BASICS OF MICROPROCESSOR

6 Hrs

Introduction – 8085 Programming model – Instruction Classification – Instruction word size – OP code format.

UNIT II – ADDRESSING MODES

6 Hrs

Write, Assemble and Execute a Simple Program – Addressing Modes

UNIT III – 8085 INSTRUCTION SET

6 Hrs

8085 Instruction Set – Data Transfer Instructions – Arithmetic Instruction – Logic and Bit Manipulation Instructions – Branch Instructions – Machine Control Instructions.

UNIT IV – MICROPROCESSOR ARCHITECTURE

6 Hrs

Microprocessor Architecture and its Operations.

UNIT V – COUNTERS AND STACK

6 Hrs

Counters and Time Delays – Stack and Subroutines

MICROPROCESSOR LAB

1. 8 Bit Addition
2. 16 Bit Addition
3. 8 Bit Multiply
4. 8 Bit Division
5. BCD Addition
6. 8 Bit Subtraction
7. Arranging In Ascending Order
8. 1's Complement
9. 2's Complement
10. Arrange In Descending Order
11. Block Move
12. Binary To ASCII
13. ASCII To Binary
14. ASCII To BCD
15. BCD To ASCII

S-Strong M-Medium L-Low

SYLLABUS

UNIT - I INTERNET BASICS

6 Hrs

Introduction to Computers - Programming Language types - History of Internet Personal computers - World Wide Web.

UNIT - II WEB BROWSERS

7 Hrs

Web Browsers - Internet Explorer - Connecting to Internet - Features of Internet explorer - Searching the Internet- Online help and tutorials - File Transmission Protocol (FTP)-Browser settings.

UNIT - III E-MAIL

5 Hr

Electronic mail - Creating an E-mail id - Sending and Receiving mails – Attaching a file - Instance messaging - Other web browsers.

UNIT - IV HTML

6 Hrs

Introduction to HTML headers – Linking - Images - Special characters and line breaks Unordered lists - Simple HTML programs.

UNIT - V DIGITAL CASH

6 Hrs

E-marketing - Consumer tracking - Electronic advertising - Search engine – CRM - Credit card payments - Digital cash and e-wallets -Micro payments- Smart card

Distribution of Marks: Theory :80% and Applications:20%

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
V		Core Theory-5	6	90	6	90	0	0	4

COURSE OBJECTIVES

- This course is to provide the ability to design console based, GUI based and web based applications in Java.
- Students will also be able to understand integrated development environment to create, debug and run multi-tier and enterprise-level applications in Java.

COURSE OUTCOMES

On successful completion of the course, students will be able to

CO Number	CO statement	Knowledge Level (K1-K4)
CO1	Understand the basic concepts of Java in OOPs	K1
CO2	Handling the Exception ,communication between threads and Applets	K2
CO3	Designing the patterns and analyze different types of classes.	K3
CO4	Specify appropriate drivers for the database connectivity in JDBC	K3
CO5	Analyzing different types of Client side technologies	K4

Knowledge level: K1 – Remember; K2 – Understand; K3 – Apply; K4 –Analyze.

MAPPING WITH PROGRAMME OUTCOMES

CO5	M	M	S	M	M	S

S- Strong; M – Medium; L-Low

SYLLABUS

UNIT-I INTRODUCTION TO JAVA

15 Hrs

Introduction to Java – Features of Java - Data Types – Variables - Arrays - Operators - Control Statements – Console I/O

OOPS IN JAVA

Class and Methods -Classes - Objects - Constructors - Overloading - Method - Access Control - String Class - Inheritance – Overriding methods - Using super - Abstract class

UNIT-II PACKAGES , THREADS

16 Hrs

Packages - Access Protection - Importing Packages - Interfaces - Exception Handling - Thread - Synchronization – Runnable Interface -Inter thread Communication

APPLET AND AWT

Applet Class – AWT Controls - Label - Textbox - List box - Combo box - Check box - Radio button - Menus - Frame - Dialog box - Tab control - Working With Graphics - Layout Manager

UNIT-III DESIGN PATTERNS

20 Hrs

Introduction to Design patterns - Catalogue for Design Pattern - Factory Method - Pattern - Prototype Pattern - Singleton Pattern - Adapter Pattern - Proxy Pattern -Decorator Pattern - Command Pattern - Template Pattern - Mediator Pattern - A Simple Servlets - The Servlet API – Servlet Package - Handling HTTP - Request and Response.

UNIT-IV JDBC

20 Hrs

JDBC - Introduction - JDBC Architecture - JDBC Classes and Interfaces – Database Access with MySQL - Steps in Developing JDBC application - Creating a New Database and Table with JDBC - Working with Database Metadata

JAVA NETWORKING

Java Networking - Basics of Networking - Networking in Java- Socket Program using TCP/IP - Socket Program using UDP- URL and Internet address classes.

UNIT-V CLIENT-SIDE PROGRAMMING

19 Hrs

Client-side programming technologies - Form design using HTML, XHTML and DHTML and CSS - Client side validation Using Java Script - Content Structuring using XML - Adding Interactivity with AJAX - Query Framework - Server-side Programming - Web Servers - Handling request and response - Handling Form data.

Distribution of Marks :Theory 75% and Problems 25%

			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
V		Core Practical-5	3	45	0	0	3	45	3

COURSE OBJECTIVES

Students will design and implement programs in the **Java programming** language that make strong use of classes , objects , Applet , ODBC and Network Concept.

SYLLABUS

1. Program to implement class and object .
2. Program to implement inheritance
3. Program to implement Compile time polymorphism
4. Program to implement run time polymorphism
5. program to implement file handling
6. Program to implement Applet Concept.
7. Program to implement AWT controls with layout Manager
8. Application using synchronization such as Thread based, Class based and synchronized statements.
9. CRUD operation Using JDBC
10. Displaying Query Results in a Table
11. TCP Socket
12. UDP Socket

Distribution of Marks: Program Output with Viva voce:85% and Record :15%

PROGRAMMING WITH PYTHON

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
V		Core Theory-6	6	90	6	90	0	0	4

COURSE OBJECTIVE

- This course helps students to Understand Python programming concept.
- It helps students to implement python concepts in real world applications like Machine Learning and Data science.

COURSE OUTCOME

On successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Understanding Basis of Python Programming.	K1
CO2	Read, write, execute by hand simple Python programs. Structure simple Python programs for solving problems.	K2
CO3	Decompose a Python program into functions and Represent compound data using Python lists, tuples, dictionaries	K3
CO4	Read and write data from/to files in Python programs	K3
CO5	Develop CRUD applications in python and Data visualization concept using various Ad-ons.	K3

Knowledge Level- K1- Remember, K2- Understand, K3- Apply, K4- Analyze

S- Strong; M- Medium; L- Low

SYLLABUS

UNIT I: PYTHON FUNDAMENTALS

18 Hrs

Introduction – Python interpreter and interactive mode - Character set – Tokens- Input and output functions - Data types –Mutable and Immutable Data type -Variables- Expressions- Statements - Operators- Comments

UNIT II: CONTROL FLOW, FUNCTIONS

19 Hrs

Conditionals: Boolean values and operators - Conditional (if) - Alternative (if-else) - Chained conditional (if-elif-else) - Iteration: While, For, Break, Continue, Pass; Fruitful functions: Return values, Parameters, Local and Global scope, Recursion; Strings: String slices, Immutability, String functions and methods; Lists as arrays. Illustrative programs: square root, GCD.

UNIT III: LISTS, TUPLES, DICTIONARIES

17 Hrs

Lists: List operations - List slices - List methods - List loop - Mutability - Aliasing - Cloning lists, List parameters - Tuples: Tuple assignment - Tuple as return value - Dictionaries: Operations and methods - Illustrative programs: Selection Sort - Histogram.

UNIT IV: FILES, MODULES, PACKAGES

18 Hrs

Files and exception - Text files - Reading and Writing files - Command line arguments, Errors and Exceptions, Handling exceptions, Modules, Packages; Illustrative programs: Copy file.

UNIT V: DATA BASE USING SQLite AND DATA VISUALISATION

19 Hrs

CRUD Operations in python using SQLite : Create Table, Insert, Delete, Select, Update Queries – Add on Third Party Libraries : Numpy – Keras – Pantas - Matplotlib- Seaborn

Distribution of Marks: Theory 75% and Problems 25%

SYLLABUS

UNIT – I OPERATING SYSTEM BASICS

15 Hrs

Basic Concepts of Operating System - Services of Operating System-Classification of Operating System- Architecture and Design of an Operating System-Process Management -Introduction to Process-Process State -PCB - Process Scheduling - Inter process Communication.

UNIT –II OPERATING SYSTEM SCHEDULING

16 Hrs

CPU Scheduling: Introduction - Types of CPU Scheduler - Scheduling Criteria - Scheduling Algorithms - FCFS Scheduling – SJF Scheduling;-Priority Scheduling - Round-Robin Scheduling-Multilevel Queue Scheduling - Deadlock - Basic Concept of Deadlock- Deadlock Prevention - Deadlock Avoidance- Deadlock - Detection and Recovery.

UNIT- III MEMORY MANAGEMENT

14 Hrs

Memory Management - Basic Concept of Memory - Address Binding; Logical and Physical Address Space- Memory Partitioning - Memory Allocation - Protection-Fragmentation and Compaction.

UNIT – IV SWAPPING

16 Hrs

Swapping- Using Bitmaps - Using Linked Lists- Paging-Mapping of Pages to Frames - Hierarchical Page Tables- Segmentation - Virtual Memory - Basic Concept of Virtual Memory- Demand Paging - Transaction Look aside Buffer (TLB) - Inverted Page Table- Page Replacement Algorithms.4

UNIT –V FILE MANAGEMENT

14 Hrs

File Management - Basic Concept of File-Directory Structure-File Protection-Allocation Methods – Various Disk Scheduling algorithms.

Self Study: Unix Operating System

Distribution of Marks: Theory 75% and Applications 25%

SYLLABUS

UNIT I: INTRODUCTION

14 Hrs

Survey of computer graphics - Overview of graphics systems – Video display devices - Raster scan systems - Random scan systems - Graphics monitors and Workstations - Input devices - Hard copy Devices - Graphics Software - Output primitives – Points and lines - Line drawing algorithms - Loading the frame buffer - Line function - Circle and Ellipse generating algorithms - Pixel addressing and object geometry - Filled area primitives.

UNIT II: TWO DIMENSIONAL GRAPHICS

16 Hrs

Two dimensional geometric transformations – Matrix representations and homogeneous coordinates - Composite transformations - Two dimensional viewing – Viewing pipeline - Viewing coordinate reference frame - Window-to-viewport - Coordinate transformation - Two dimensional viewing functions - Clipping operations – Point - Line - Polygon clipping algorithms.

UNIT III: THREE DIMENSIONAL GRAPHICS

15 Hrs

Three dimensional concepts: Three dimensional object representations – Polygon surfaces- Polygon tables - Plane equations – Polygon meshes: Curved Lines and surfaces - Quadratic surfaces - Blobby objects - Spline representations – Bezier curves and surfaces - B-Spline curves and surfaces - Transformation And Viewing: Three dimensional geometric and modeling transformations – Translation, Rotation, Scaling, composite transformations: Three dimensional viewing – viewing pipeline, viewing coordinates, Projections, Clipping: Visible surface detection methods.

UNIT IV: ILLUMINATION AND COLOUR MODELS

15 Hrs

Light sources – Basic illumination models – Halftone patterns and dithering techniques; Properties of light – Standard primaries and chromaticity diagram: Intuitive color concepts – RGB color model – YIQ color model – CMY color model – HSV color model – HLS color model: Color selection.

UNIT V ANIMATIONS & REALISM

15 Hrs

Animation Graphics: Design of Animation sequences – Animation function – Raster animation – Key frame systems – Motion specification – Morphing – Tweening - Computer Graphics Realism: Tiling the plane – Recursively defined curves – Koch curves – C curves Dragons – Space filling curves – Fractals – Grammar based models – Turtle graphics.

			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
V		Elective - II	5	75	5	75	0	0	3

COURSE OBJECTIVE

Students learn about computer network organization and implementation, obtaining a theoretical understanding of data communication and computer networks, and gaining practical experience in installation, monitoring, and troubleshooting of current LAN systems.

COURSE OUTCOME

On successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	To study the concepts of communication networks, protocols and their Performance	K2
CO2	To study the concepts of transmission Medium and Error Control	K3
CO3	To learn about Switching Concept	K3
CO4	To Study about the X.25 layers	K3
CO5	To apply routing Algorithms and understand various internetworking Devices	K4

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

S-Strong, M- Medium, L-Low

SYLLABUS

UNIT I – BASICS OF DATA COMMUNICATION

15 Hrs

Introduction to Data Communication, Network, Protocols & standards and standards organizations - Line Configuration - Topology -Transmission mode - Classification of Network - OSI Model - Layers of OSI Model.

UNIT II – TRANSMISSION MEDIUM

14 Hrs

Parallel and Serial Transmission – DTE-DCE Interface - Modems - Guided Media - Unguided Media - Types of Error - Error Detection - Error Corrections.

UNIT III – MULTIPLEXING AND SWITCHING

16 Hrs

Multiplexing - Types of Multiplexing - Multiplexing Application - Telephone system - Project 802 - Ethernet - Token Bus - Token Ring - Circuit Switching - Packet Switching - Message switching - Connection Oriented and Connectionless services.

UNIT IV – ISDN AND X.25 LAYER

14 Hrs

History of Analog and Digital Network- Access to ISDN - ISDN Layers - Broadband ISDN - X.25 Layers.

UNIT V – NETWORKING DEVICES

15 Hrs

Repeaters - Bridges - Routers - Gateway - Routing algorithms - TCP/IP Network and Transport layer - World Wide Web.

Distribution of Marks: Theory 80% and Applications: 20%

SYLLABUS

UNIT 1: DIGITAL IMAGE FUNDAMENTALS

14 Hrs

Light and Electromagnetic spectrum - Components of Image processing system - Image formation and digitization concepts - Neighbors of pixel - Adjacency connectivity - Regions and boundaries, Distance measures, Applications.

UNIT 2: IMAGE ENHANCEMENTS

15 Hrs

Image Enhancements: Basic gray level transformations - Histogram processing - Using arithmetic/Logic operations - Smoothing spatial filters, Sharpening spatial filters - In Frequency domain: Introduction to the Fourier transform and frequency domain concepts - Smoothing frequency - Domain filters - Sharpening frequency domain filters.

UNIT 3: IMAGE RESTORATION

14 Hrs

Various noise models - Image restoration using spatial domain filtering - Image restoration using frequency domain filtering - Estimating the degradation function - Inverse filtering.

UNIT 4: COLOUR IMAGE PROCESSING

15 Hrs

Color fundamentals - Color models - Color transformation - Smoothing and Sharpening - Color segmentation

UNIT 5: IMAGE COMPRESSION AND IMAGE SEGMENTATION

15Hrs

Introduction - Image compression model - Error-free compression - Lossy compression - Detection of discontinuities - Edge linking and boundary detection - Thresholding

COURSE OBJECTIVES

This Course helps the student should be able to: Identify and use **UNIX** utilities to create and manage simple file processing operations, organize directory structures with appropriate security, and develop shell scripts to perform more complex tasks.

COURSE OUTCOME

- On successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Learning the fundamental concepts of Unix Operating System.	K1
CO2	To familiarize the student with the concept Bourne Shell	K2
CO3	Analyze the technique of Control Structure.	K3
CO4	Understand and learn the importance of Shell Script File	K2
CO5	To learn the concept of Unix Command and how to apply it.	K3

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

SYLLABUS

UNIT I – UNIX OVERVIEW

6 Hrs

UNIX Overview – The Kernel – Running a command – Files and Directories – Special Files; Problem – solving Approaches in Unix – Using single and compound Unix command – Shell scripts – C programs for solving problems.

UNIT II – BOURNE SHELL

6 Hrs

Working with the Bourne Shell – Filename Expansion – Shell Meta characters - Shell Variables – Shell Scripts More Shell Facilities and Shell Meta characters.

UNIT III - SHELL CONTROL STRUCTURE

6 Hrs

Shell Scripts – The for Loop – Choice – Making : The Case statement – Conditional Looping : While and until – The if Statement – The test command – Error Checking – trap command

UNIT IV – SHELL SCRIPT FILES

6 Hrs

Shell Script Examples – Adding Arithmetic to a Shell : expr – A countdown loop – Printing a Collection of Files – Shell scripts with Multiple options – Passing Arguments to Scripts – Spell Command.

UNIT V – UNIX COMMANDS

6 Hrs

UNIX Commands like – ls – cat – vi editor – chmod – mv – cp – rm – grep – mkdir – rmdir – chdir with various options

PRACTICAL PROGRAM

1. Write script to find Prime Test.
2. Write script to find Palindrome Test.
3. Write script to find Fibonacci Series Generation.
4. Write script to find Armstrong No Test.
5. Write script to use User-friendly change of modes (chmod).
6. Write script to see current date, time, username and current directory.
7. Write script to print Nos. as 5,4,3,2,1.
8. Write shell script using for loop to print the following
1
1 2
2 3 3
3 4 4 4
4 5 5 5 5
9. Script to find out biggest no.
10. Write script to print given nos. Sum of all digits.

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Core Theory-8	6	90	6	90	0	0	4

COURSE OBJECTIVES

- To understand the working concept of cloud computing.
- To familiarize themselves with the lead players in cloud.
- To appreciate the emergence of cloud as the next generation computing paradigm.

COURSE OUTCOME

On successful completion of this course, students will be able to

CO Number	CO Statement	Knowledge Level(K1-K4)
CO1	Identify the architecture, infrastructure and delivery models of cloud computing	K1
CO2	Articulate the main concepts, key technologies, strengths and limitations of cloud computing	K3
CO3	The core issues of cloud computing such as security, privacy and interoperability	K3
CO4	Evaluating Web tools	K4
CO5	Applying the cloud Services to real time	K3

K1-Remember; K2 –Understand; K3-Apply; K4-Analyze.

CO4	S	S	S	M	S	S
CO5	S	S	S	S	S	S

S-Strong; M-Medium; L-Low

SYLLABUS

UNIT –I: CLOUD COMPUTING BASICS

18 Hrs

Fundamentals –Introduction to Cloud Computing, Definition, Characteristics, Components, Cloud provider, SAAS, PAAS, IAAS and Others- Organizational scenarios of clouds, Administering & Monitoring cloud services-benefits and limitations- Deploy application over cloud- Comparison among SAAS, PAAS, IAAS -Cloud computing platforms -Infrastructure as service(Amazon EC2,Platform as Service: Google App Engine, Microsoft Azure, Utility Computing, Elastic Computing)

UNIT- II : VIRTUALIZATION

17 Hrs

Web-Based Application – Pros and Cons of Cloud Service Development – Web services: SOAP and REST, SOAP versus REST, AJAX- Virtual machine technology- virtualization applications in enterprises, Pitfalls of virtualization Multitenant .

SOFTWARE: Multi-entity support, Multi-schema approach- Multitenance using cloud data stores -Data access control for enterprise applications.

UNIT -III CLOUD INFRASTRUCTURE

17 Hrs

Centralizing Email communications –collaborating on Schedules – Collaborating on To-Do Lists – Collaborating Contact Lists – Cloud computing for the Community – Collaborating on Group Projects and Events – Cloud Computing for the Corporation.

UNIT -IV CLOUD COMPUTING TECHNOLOGY

19 Hrs

Collaborating on Calendars, Schedules and Task Management – Exploring Online Scheduling Applications–Exploring Online Planning and Task Management – Collaborating on Event Management – Collaborating on Contact Management – Collaborating on Project Management – Collaborating on Word Processing – Collaborating on Databases – Storing and Sharing Files – Evaluating Web Mail Services – Evaluating Web Conference Tools – Collaborating via Social Networks and Groupware – Collaborating via Blogs and Wikis.

UNIT -V CLOUD APPLICATION DEVELOPMENT

19 Hrs

OGSA – Sample Use Cases – OGSA Platform Components – OGSI – OGSA Basic Services. Globus Toolkit – Architecture – Programming Model – High Level Services – OGSI.Net. Middleware Solutions- Issues in cloud computing-Implementing real time application over cloud platform Issues in Intercloud environments- QOS Issues in Cloud- Dependability-Datamigration - Streaming in Cloud.

Distribution of Marks: Theory 75% and Applications: 25%

TEACHING METHODOLOGY

1. Power point presentation
2. Seminar by students
3. Assignment to students
4. Lecture through video.
5. Discussion and interaction in class room

SYLLABUS DESIGNER

1. Mrs.G.SANGEETHA LAKSHMI, Assistant Professor & HOD, Dept of Computer Science & Applications
2. Dr.S THARANI, Assistant Prof, Dept of Computer Science & Applications

PRACTICAL: CLOUD COMPUTING

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Core Pratical-8	3	45	0	0	3	45	3

COURSE OBJECTIVE

- ❑ To develop web applications in cloud
- ❑ To learn the design and development process involved in creating a cloud based application
- ❑ To learn to implement and use parallel programming using Hadoop

SYLLABUS

1. Install Virtual box/Mware Workstation with different flavours of Linux or windows OS on top of windows7 or 8.
2. Install a C compiler in the virtual machine created using virtual box and execute Simple Programs
3. Install Google App Engine. Create hello world app and other simple web applications using python/java.
4. Find a procedure to transfer the files from one virtual machine to another virtual machine.
5. Install Hadoop single node cluster and run simple applications like wordcount.

Distribution of Marks: Program Output with Viva voce: 85% and Record: 15%

SYLLABUS DESIGNER

1. Mrs.G.SANGEETHA LAKSHMI, Assistant Professor & HOD, Dept of Computer Science & Applications
- 2.Dr.S THARANI, Assistant Prof, Dept of Computer Science & Applications

1. SOFTWARE ENGINEERING

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Elective -III	5	75	5	75	0	0	3

COURSE OBJECTIVE

- To know more about the systematic concept for designing, developing, implementing and maintaining the software products in IT Industry.
- This course helps to understand the concept software and what are the various steps involved to deploy the software under engineering concept.

COURSE OUTCOMES

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Acquire strong fundamental knowledge in science, mathematics, fundamentals of computer science, software engineering and multidisciplinary engineering to begin in practice as a software engineer.	K1
CO2	Building the analysis model and acquiring the modeling concepts.	K2
CO3	Design applicable solutions in one or more application domains using software engineering approaches that integrate ethical, social, legal and economic concerns.	K3
CO4	Applying testing methods and acquiring the testing strategies	K3
CO5	Apply new software models, techniques and technologies to bring out innovative and novelistic solutions for the growth of the society in all aspects and evolving into their continuous professional development.	K3

K1-Remember; K2 –Understand; K3-Apply; K4-Analyz

S- Strong; M- Medium; L- Low

SYLLABUS

UNIT I – INTRODUCTION TO SOFTWARE ENGINEERING 15 Hrs

Introduction to software engineering: Introduction-some definitions-some size factors-quality and productivity factors. Planning a software project: defining the problem- planning the development process-planning the organizational structure

UNIT II – SOFTWARE COST ESTIMATION 15 Hrs

Software cost estimation: Software cost factors-software cost estimation techniques. Software requirements definition: formal specification techniques.

UNIT III – SOFTWARE DESIGN 15 Hrs

Software design: Fundamental design concepts-modules and modularization criteria-Design notations-design techniques.

UNIT IV – IMPLEMENTATION ISSUES 15 Hrs

Implementation issues: Structured coding techniques-coding style-modern programming language features-type checking.

UNIT V – VERIFICATION AND VALIDATION TECHNIQUES 15 Hrs

Verification and validation techniques: Quality assurance-walkthroughs and inspections-unit testing and debugging-system testing. Software maintenance-managerial aspects of software maintenance-configuration management-other maintenance tools and techniques

Distribution of Marks: Theory 85% and Applications

			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Elective III	5	75	5	75	0	0	3

COURSE OBJECTIVE

- To provide the students with conceptual knowledge about E-Commerce, E-Business, E-marketing and its legal framework.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Demonstrate an understanding of E-commerce Framework	K1
CO2	Describe the infrastructure for E-commerce	K2
CO3	Discuss Network security and firewalls	K3
CO4	Assess Electronic payment	K2
CO5	Describe the key features of Intraorganizational Electronic Commerce and explain how they relate to each other EDI implementation.	K3

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

SYLLABUS

UNIT-I: INTRODUCTION TO E-COMMERCE

16 Hrs

Electronic Commerce Framework, Traditional vs. Electronic business applications, the anatomy of E-commerce applications.

UNIT-II : NETWORKS AND ITS APPLICATIONS

16 Hrs

Network infrastructure for E-Commerce - components of the I-way - Global information distribution networks - public policy issues shaping the I-way. The internet as a network infrastructure. The Business of the internet commercialization.

UNIT-III : NETWORK SECURITY

12 Hrs

Network security and firewalls - client server network security - firewalls and network security - data and message security - encrypted documents and electronic mail.

UNIT-IV: WWW AND EDI

15 Hrs

Electronic Commerce and world wide web, consumer oriented E-commerce, Electronic payment systems, Electronic data interchange (EDI),EDI applications in business ,EDI and E-commerce EDI implementation.

UNIT-V: DIGITAL LIBRARY

16 Hrs

Intra organizational Electronic Commerce

Distribution of Marks: Theory : 70% and Problems: 30%

1.DESIGN AND ANALYSIS OF ALGORITHM

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Elective – IV	5	75	5	75	0	0	3

COURSE OBJECTIVE

- To learn and design the software using the concept of various algorithms using its characteristic and performance in Applications to be developed
- To build a solid foundation of the most important fundamental subject in computer science.
- Creative thinking is essential to algorithm design and mathematical acumen and programming skills.

COURSE OUTCOME

On Successful Completion of this course, students will enable

CO Number	CO Statement	Knowledge Level (K1-K4)
CO1	Explain about basic details of Algorithm.	K1
CO2	Describe about Divide and conquer paradigm concept with sorting techniques	K2
CO3	Synthesize new graph algorithms and algorithms that employ graph computations as key components, and analyze them.	K4
CO4	Implementing Backtracking paradigms in graph traversal.	K3
CO5	Design data structures techniques using bounding techniques.	K4

Knowledge Level – K1-Remember, K2- Understand, K3-Apply, K4-Analyze

MAPPING WITH PROGRAMME OUTCOME

CO5	M	S	S	M	L	M

S-Strong M-Medium L-Low

SYLLABUS

UNIT I – ANALYSIS OF ALGORITHM

15 Hrs

Algorithm-Characteristics - Performance Analysis-Space & Time complexity - Asymptotic notations (Ω , θ , O)

UNIT II – DIVIDE & CONQUER

16 Hrs

Divide & conquer - General method - Finding Maximum & Minimum - Merge Sort - Quick Sort - Greedy method - Knapsack problem - Job sequencing.

UNIT III – GRAPH & DYNAMIC PROGRAMMING

15 Hrs

Dynamic programming - General method - Multi stage graph - Multi string editing - Traveling salesman problem.

UNIT IV – BACKTRACKING

14 Hrs

Backtracking - General method - 8 Queen problem - Sum of subsets - Graph coloring

UNIT V – BRANCH & BOUND

15 Hrs

Branch & Bound - Least cost search - Bounding problem - FIFO brand and bounding

Distribution of Marks: **Theory: 75% Algorithms: 25 %**

Semester	Subject Code	Category	Lecture Hrs		Theory Hrs		Practical		Credits
			Per week	Per Sem	Per week	Per Sem	Per week	Per Sem	
VI		Elective –IV	5	75	5	75	0	0	3

COURSE OBJECTIVE

➤ This paper provides an exposure to Big data, to learn the different ways of Data Analysis, to be familiar with data streams, to learn the mining and clustering and able to be familiar with the visualization concept.

COURSE OUTCOME

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level (K1 – K4)
CO1	Learn the concept behind Big Data and apply the statistical analysis methods.	K1, K2 & K3
CO2	Learn and Apply different Data Analysis Techniques	K1, K2 & K3
CO3	Learn Data Streams	K1, K2
CO4	Learn and Apply the Mining and Clustering Techniques	K1, K2 & K3
CO5	Learn and apply the different data Visualization Concepts	K2&k3

Knowledge Level – K1 – Remember, K2 – Understand, K3 – Apply, K4 – Analyze

CO5	S	S	S	M	S	M

S – Strong

M – Medium

L – Low

SYLLABUS

UNIT I – INTRODUCTION TO BIG DATA

14 HRS

Introduction to Big Data Platform – Challenges of conventional systems - Web data – Evolution of Analytic scalability, analytic processes and tools, Analysis VS Reporting - Modern data analytic tools, Statistical concepts: Sampling distributions, re-sampling, statistical inference, prediction error.

UNIT II – DATA ANALYSIS

16 Hrs

Regression modeling, Multivariate analysis, Bayesian modeling, inference and Bayesian networks, Support vector and kernel methods, Analysis of time series: linear systems analysis, nonlinear dynamics - Rule induction - Neural networks: learning and generalization, competitive learning, principal component analysis and neural networks.

UNIT III – MINING DATA STREAMS

14 Hrs

Introduction to Streams Concepts – Stream data model and architecture - Stream Computing, Sampling data in a stream – Filtering streams – Counting distinct elements in a stream –Estimating moments – Counting oneness in a window – Decaying window – Real Time Analytics Platform(RTAP) applications.

UNIT IV – FREQUENT ITEMSETS AND CLUSTERING

16 Hrs

Mining Frequent Itemsets - Market based model – Apriori Algorithm – Handling large data sets in Main memory – Limited Pass algorithm – Counting frequent Itemsets in a stream – Clustering Techniques – Hierarchical – K- Means – Clustering high dimensional data – CLIQUE and PROCLUS – Frequent pattern based clustering methods – Clustering in non-Euclidean space – Clustering for streams and Parallelism.

UNIT V – FRAMEWORKS AND VISUALIZATION

15 Hrs

MapReduce – Hadoop, Hive, Map R – Sharding – NoSQL Databases - S3 - Hadoop Distributed file systems – Visualizations - Visual data analysis techniques, interaction techniques; Systems and applications

Distribution of Marks: Theory: 80% and Application: 20%

SYLLABUS

UNIT I – FLASH INTRODUCTION

6 Hrs

Introducing Flash – Basics – Creating Objects – Editing Objects.

UNIT II – WORKING WITH COLORS AND FONT

6 Hrs

Color and Text – Symbols and Instances – Library – Bitmaps, Sound, Video.

UNIT III – WORKING WITH FRAMES AND LAYERS

6 Hrs

Frames and Layers – Animation Basics – Understanding animation – Scenes – Frame –by-Frame Animation – Onion Skinning.

UNIT IV – WORKING WITH ANIMATIONS

6 Hrs

Text Animation – Motion Tweening – Shape tweening – Motion guide – Movie clips.

UNIT V – WORKING WITH MOVIES

6 Hrs

Making Buttons – Creating an animated button – Creating Linear Movies

PRACTICALS

1. Creating And Editing Objects
2. Text Manipulation
3. Frame By Frame Animation
4. Motion Tweening
5. Shape Tweening
6. Animating Text
7. Movie Clips
8. Creating Buttons
